

## *The Golden Retriever Club*

*of America, Inc.*

Dear Doctor,

As you know, Golden Retrievers have a high incidence of cancer, with a 1998 Health Survey (<http://grca.org/pdf/health/healthsurvey.pdf>) indicating that 57% of females and 66% of males will be affected. While many types of cancer are elevated in the breed, approximately half of the totals are lymphoma (1 in 8 Golden Retrievers) and hemangiosarcoma (1 in 5 Golden Retrievers).

The Golden Retriever Club of America and the Golden Retriever Foundation have dedicated significant resources to improving Golden health, and are actively supporting numerous research studies investigating cancer in the breed. We are pleased to see results of these studies regularly published in premier medical journals, and translated into improved care opportunities. For example, a recently published study (Modiano JF, Breen M, Burnett RC, Parker HG, Incuse S, Thomas R, Avery PR, Lindblad-Toh K, Ostrander EA, Cutter GC, Avery AC **Distinct B-cell and T-cell lymphoproliferative disease prevalence among dog breeds indicates heritable risk.** Cancer Res. 2005 Jul 1;65(13):5654-61.) shows that unlike published averages for all breeds (67% B-cell, 23% T-cell), Golden Retriever lymphomas are more heavily weighted toward T-cell disease (54%) rather than B-cell disease (46%). This information has the potential to impact therapy decisions, as owners and veterinarians can take breed specific data into consideration when they explore treatment options.

In addition to financial support, we also aid researchers in obtaining vital tissue and/or blood samples from affected dogs. Along with this letter we have supplied a Cancer Sample Donation Chart with contact information for several of the programs investigating various cancers in Golden Retrievers. Owners do not need to be members of GRCA to participate, and we find that many owners are comforted to know that samples from their affected dog may benefit other dogs in the future. We hope that you will consider discussing sample donation with your clients when their Golden Retriever is diagnosed with (or suspected of having) cancer.

Thank you for your consideration of this request, and please feel free to contact us or refer your clients to us for further information.

Sincerely,

The Health & Genetics Committee  
Golden Retriever Club of America

# Contact Information for Participation in Golden Retriever Cancer Research

**Please print this page and ask to have it put in your dog's veterinary chart for immediate access in an emergency.**

If you are willing to donate:	Lymphoma	Hemangiosarcoma, osteosarcoma, melanoma	Brain tumor	Malignant Histiocytosis, soft-tissue sarcomas	Mast cell tumor	Unknown or other
<b>Blood &amp; tissue</b>	# 1	# 1	# 2	# 2	# 5	See Notes Below
<b>Blood only</b>	# 1 and/or # 3* or # 4*	# 1 and/or # 4	# 4	# 3	# 4	See Notes Below

\*if dog will not be treated, or is already undergoing treatment, and tumor was phenotyped, send blood for T-cell tumors to # 3, blood for B-cell tumors to # 4. Otherwise contact # 1 for eligibility to participate.

## Additional Notes

- Participation in some studies may be limited based on eligibility and availability of research funds
- Handling of tissue samples is time sensitive and must follow specific protocols. Please contact the research lab as early as possible **before** collecting the sample to make arrangements.
- Most consent forms will ask you to sign or check a box to permit sharing of samples. Please sign or check the box to give this permission.
- If you are not certain who to contact, or would like to discuss options further, please contact the GRCA Research Facilitator, Rhonda Hovan, at [rhondahovan@aol.com](mailto:rhondahovan@aol.com) or 330-668-0044 or 330-338-4236.
- In addition to participating in the above current studies, blood can be stored in the CHIC DNA repository to for use in future research. We encourage owners to participate, instructions at <http://www.caninehealthinfo.org/dnabank.html> There is no charge for affected dogs; email Eddie Dzuik directly at [EDziuk@OFFA.org](mailto:EDziuk@OFFA.org)
- Unaffected dogs over the age of 10 can also participate by submitting a blood sample to Dr Kerstin Lindblad-Toh (# 4).
